PAC M4

Equipped with a classic gas block with a front sight and a carry handle, it harkens back to the classic M4 rifles. Depending on the version, the rifle is equipped with a polymer handguard or a handguard with Picatinny rails.

In addition, the rifle has a classic polymer stock and an A2 pistol grip. We have enhanced our rifles with a rear plate with a place to attach a sling swivel.

PAC M4 Classic

PAC M4 Mini

	Mini - 10.5"	Classic - 14.5"
Caliber	.223 Rem / 5.56 x 45 mm	
Action	Semi-automatic, Direct Impingement	
Length	71 cm	86 cm
Barrel	10.5"	14.5"
Gas System	Carbine	
Muzzle Device	Flash Suppressor (birdcage)	
Stock	Polymer, 6-position	
Grip	Profiled, rubberized	
Handguard	Polymer covers	Picatinny rails

PAC15 GEN3

The latest generation of our rifles, proudly manufactured in our facility in Greater Poland. Our goal was to create a rifle that works well with sound suppressors, which are becoming increasingly popular among shooters. That's why we introduced an **adjustable gas block** for precise control of the gas flow to the bolt carrier group and a **ventilated MEVA PRO charging handle**.

Additionally, the rifle features a **Cerakote® coating**, which provides excellent protection against mechanical damage and corrosion while enhancing its appearance.

Gen III rifles are the first series to offer (for specific barrel lengths) a choice between a **standard barrel** (medium profile, 18 mm) and a **heavy barrel** (23 mm), which provides greater heat capacity and improved accuracy during sustained fire.

	10.5"	12.65"	14.5"	16.25"
Caliber	.223 Rem / 5.56 x 45 mm			
Action	Semi-automatic, Direct Impingement			
Overall length	71 cm	76 cm	86 cm	89 cm
Barrel	10.5"	12.65"	14.5"	16.25"
Barrel profile	Medium	Medium or Heavy	Heavy	Heavy
Gas system	Carbine	Mid-length	Mid-length	Rifle-length
Muzzle device	Flash hider (birdcage)			
Stock	Reinforced polymer, 6-position adjustable			
Grip	Ergonomic, rubberized			
Handguard	Aluminum, M-LOK system			
Included accessories	Folding iron sights

PAC15 GEN3

The latest generation of our rifles, proudly manufactured in our facility in Greater Poland. Our goal was to create a rifle that works well with sound suppressors, which are gaining popularity among shooters. That's why we introduced an adjustable gas block that allows precise regulation of the gas flow to the bolt carrier group, along with the ventilated MEVA PRO charging handle.

Additionally, the rifle features an original Cerakote® coating, providing excellent protection against mechanical damage and corrosion while also enhancing its appearance.

The third-generation rifles are the first series in which you have the option (for certain barrel lengths) to choose between a standard barrel (medium profile, 18 mm) and a heavy barrel (23 mm), which offers greater heat capacity and improved accuracy during sustained fire.

HANDGUARD

Since Generation I, our rifles have featured a handguard with seven M-LOK interface planes, allowing easy customization by mounting accessories exactly where needed.

In Generation 3, we redesigned the front edge of the handguard to prevent interference with suppressors.

UPPER RECEIVER

The new MEVA PRO ambidextrous charging handle features ventilation ports that disperse gas blowback into the upper receiver when using a suppressor.

CERAKOTE

PAC15 Gen 3 rifles now feature an original Cerakote® coating, offering exceptional wear and damage resistance while maintaining a great appearance. Available colors: Burnt Bronze and Sniper Grey.

GAS SYSTEM

Since Generation I, our rifles have featured side ports in the barrel, with diameters individually adjusted to barrel length. This ensures a smooth operating cycle and reduced wear on moving parts.

With suppressors gaining popularity, Gen 3 introduces an adjustable gas block, ensuring optimal performance when a suppressor is installed.

LOWER RECEIVER

We implemented an ergonomic pistol grip, previously introduced in Gen IIA.

The standard trigger guard has been replaced with a rounded polymer version, eliminating discomfort to the middle finger during extended shooting sessions.

A rear plate with a QD sling attachment point allows smooth transition of the sling between the stock and lower receiver as needed.

STOCK

The new-generation stock, introduced with Gen IIA rifles, features improved polymer quality and a reinforced design, making it more resistant to mechanical damage. In terms of durability, it competes with leading manufacturers in the market. Additionally, the ergonomics have been improved— a slightly contoured cheek rest provides better contact with the rifle, while the perpendicular rubberized buttplate enhances control during rapid fire.
